

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of claims:

Claim 1. (currently amended) A method for providing information to a client browser, the method comprising:

- sending a first request from a client to a server;
- responsive to the first request, initiating a request by the server to create a token;
- responsive to the first request, sending information from the server to the client, the information including at least display data and a first link corresponding to the token;
- rendering the display data in a browser of the client;
- sending a second request from the client to the first link;
- determining at the first link whether the token is created; and
- if the token is created, sending the token to the client.

Claim 2. (original) A method according to claim 1, further comprising:

- starting a timer after initiating the request to create a token.

Claim 3. (original) A method according to claim 2, further comprising:

- if the token is not yet created, comparing the timer to a predetermined value.

Claim 4. (original) A method according to claim 3, further comprising:

- if the timer exceeds the predetermined value, sending a second link to the client,

the second link corresponding to the token.

Claim 5. (currently amended) Computer executable software code transmitted as an information signal, the code for providing information to a client browser, the code comprising:

code to send a first request from a client to a server;

responsive to the first request, code to initiate a request by the server to create a token;

responsive to the first request, code to send information from the server to the client, the information including at least display data and a first link corresponding to the token;

code to render the display data in a browser of the client;

code to send a second request from the client to the first link;

code to determine at the first link whether the token is created; and

if the token is created, code to send the token to the client.

Claim 6. (currently amended) A computer readable medium having computer executable code stored thereon, the code for providing information to a client browser, the code comprising:

code to send a first request from a client to a server;

responsive to the first request, code to initiate a request by the server to create a token;

responsive to the first request, code to send information from the server to the client, the information including at least display data and a first link corresponding to the token;

code to render the display data in a browser of the client;

code to send a second request from the client to the first link;
code to determine at the first link whether the token is created; and
if the token is created, code to send the token to the client.

Claim 7. (currently amended) A programmed computer for providing information to a client browser, comprising:

a memory having at least one region for storing computer executable program code; and

a processor for executing the program code stored in the memory, wherein the program code comprises:

code for providing information to a client browser, the code comprising:

code to send a first request from a client to a server;

responsive to the first request, code to initiate a request by the server to create a token;

responsive to the first request, code to send information from the server to the client, the information including at least display data and a first link corresponding to the token;

code to render the display data in a browser of the client;

code to send a second request from the client to the first link;

code to determine at the first link whether the token is created; and

if the token is created, code to send the token to the client.
